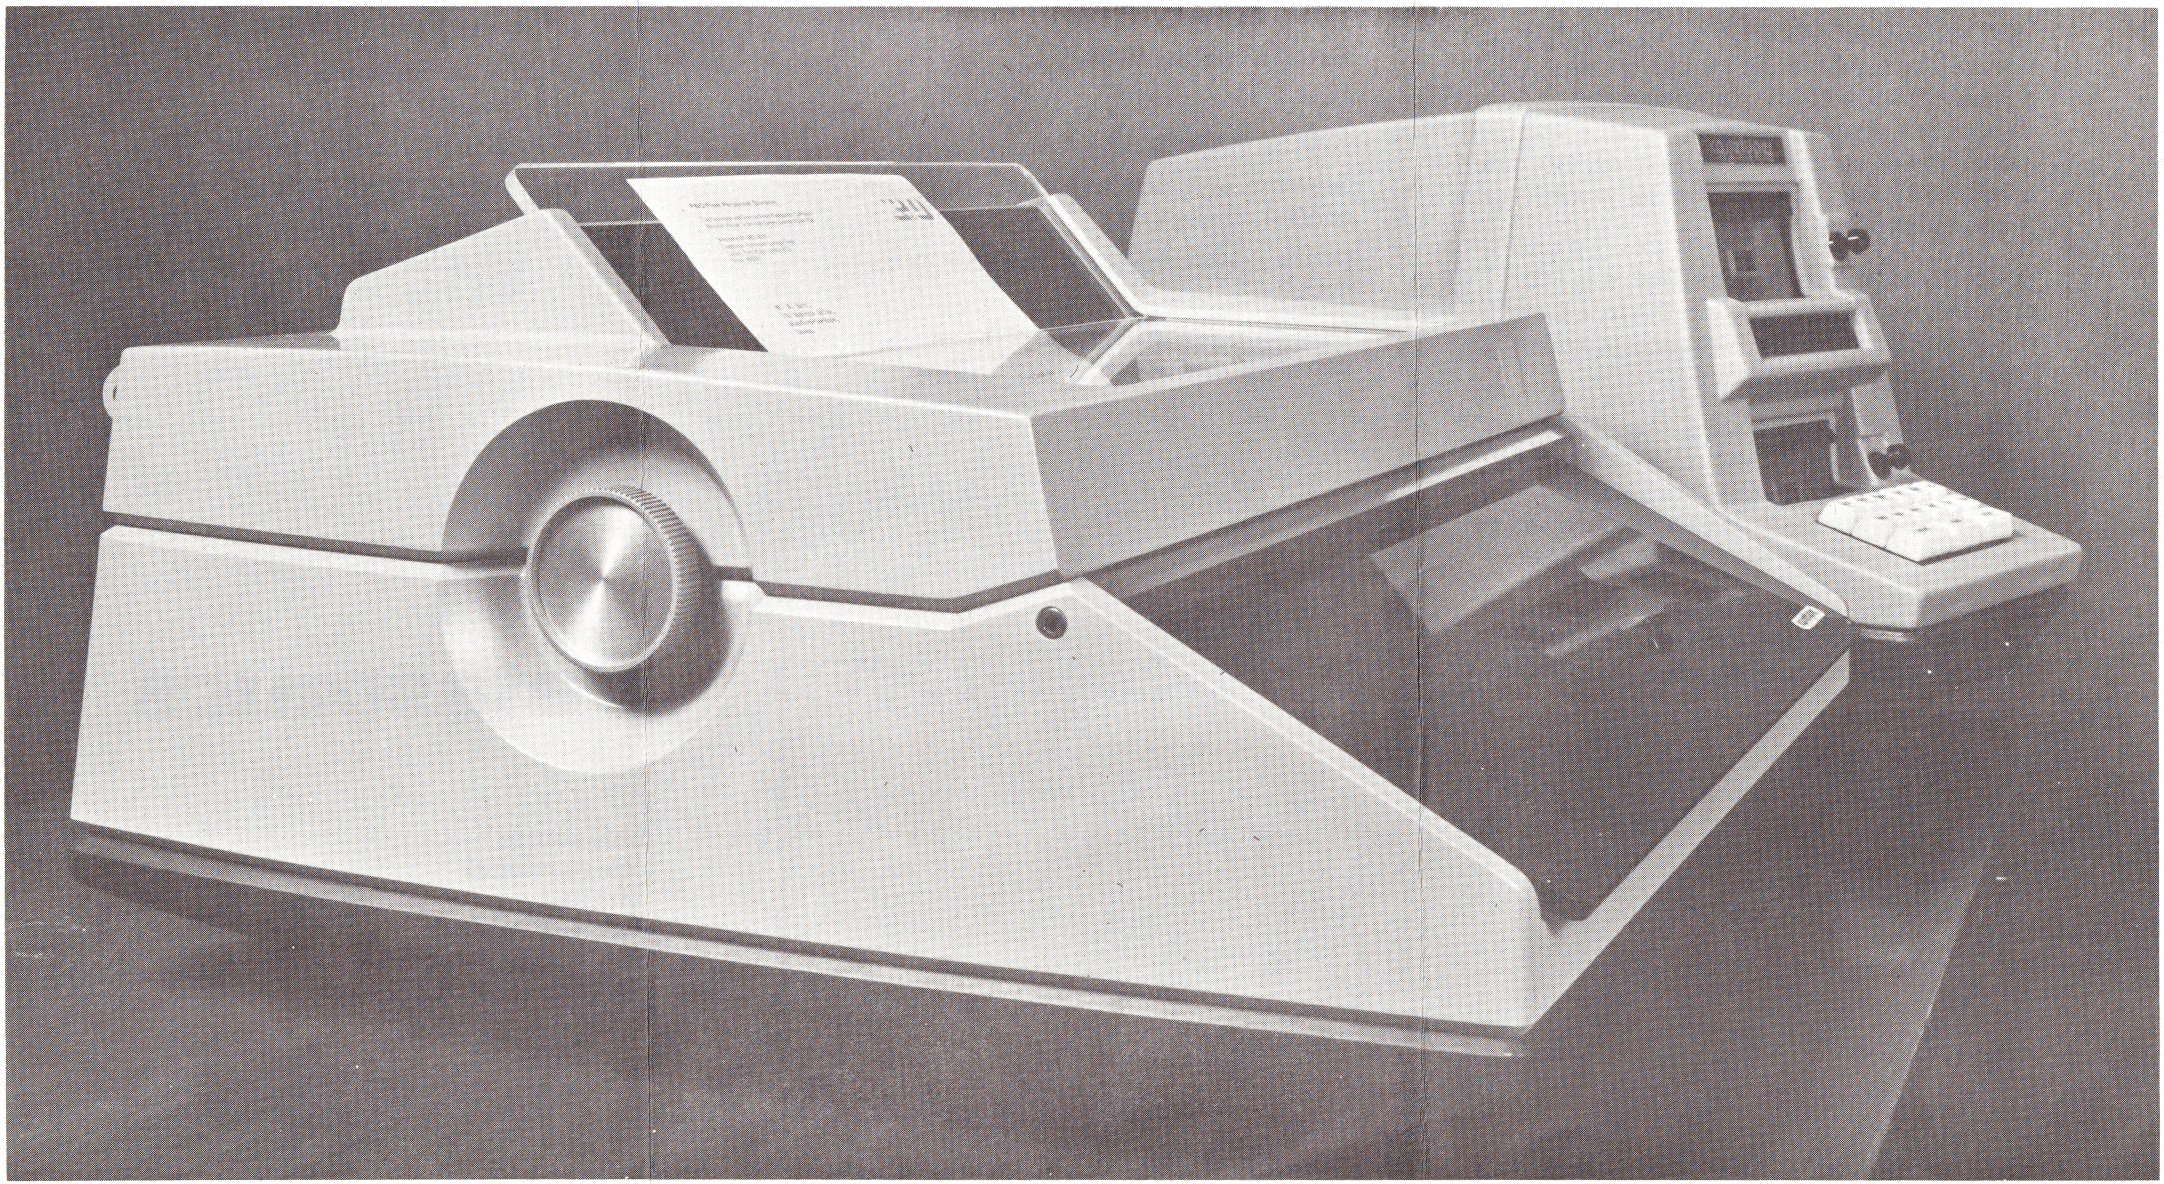
Selectric Silencer

by **Datasonics**

words getting around
...quietly



The Selectric Silencer from DATASONICS offers users of IBM Selectric equipment the first completely practical solution to the noise created by this popular typewriter.

With the Selectric Silencer fitted, the operator can use her machine without restriction. All normal typing actions, paper insertion/ adjustment, error correction, use of platen knobs, use of continuous stationery, etc., are as easy with the Selectric Silencer as without – an industry first.

Styled to compliment any office, it is precision moulded in polyurethane, a material that is strong, light in weight and provides excellent sound attenuation.

To further increase the efficiency of the unit, it is lined with an acoustic control foam. All opening actions of the unit are counter-balanced and the keyboard flap is designed to be below the typist's sight line when open.

It can be fitted in two minutes without the use of special tools and even comes with its own high performance vibration mat.

Here are some of the key features:

Good looks

Operator convenience

Compact size

Exterior platten knobs

Complete visibility

Built-in anti-vibration mat

Separate keyboard flap maximizes sound control during input

Counter-balanced top cover holds in any position

Counter-balanced keyboard flap stays below sight line when open.

Local Agent

The Selectric Silencer is available in five models for most Selectric typewriters, word processors and terminals –

DS100	Standard IBM Selectric office typewriters
DS200	For Selectric machines recessed in desk top
DS300	Savin 900, Kalle Infotec 7000
DS400	IBM MCST, CPT 4200
DS500	Continuous output terminals IBM 2741, etc (this unit is fitted with a fan).
